Project LockedIn: Specification & Feature List

1. Chastity Compliance Checking System (Anti-Cheat)

The "Wheel of Fate" has been replaced by a deterministic **Compliance & Anti-Cheat Engine**. This system ensures zero-bypass integrity through a multi-factor verification loop.

1.1 The Verification Loop

Compliance is measured through the **Total Integrity Factor (I)**:

$$I = (H_{sync} \cdot V_{vision} \cdot B_{metrics})$$

Where:

- H_{sync}: Real-time API telemetry from the physical lock (Closed/Open state).
- V_{vision}: Daily random "Security Scans" requiring AI-validated video evidence.
- $B_{metrics}$: Heart rate and skin conductivity monitoring to detect arousal or unauthorized manual stimulation.

1.2 Cheating Penalties

Any drop in I below 1.0 triggers the **Permanent Extension Protocol**:

- **Detected Tamper:** Automatic 7-day addition + "Humiliation Lockdown" (AI vocal redirection).
- **Missed Verification:** Multiplier effect on the current sentence: $D_{new} = D_{current} \times 1.5$.

2. Audio Training & Affirmation Library

A specialized vault for hypnotic conditioning.

2.1 Hypnotic Affirmation Uploads

- **Training Tracks:** Users upload `.mp3` or `.wav` files containing specific affirmations (e.g., "Chastity is my only state").
- **Transcript Integration:** The AI Master ingests the text transcripts of these files to align its verbal coaching with the specific themes of the user's training materials.
- **Biometric Calibration:** During playback, the AI monitors HRV (Heart Rate Variability). If the user remains in a "suggestible state," compliance points are awarded.

3. The Regimen Builder (Updated)

- **Permanent Indulgence Track:** Tasks designed to rewire the user's reward system to find pleasure exclusively in the locked state.
- **Transcript-Based Coaching:** If an uploaded transcript emphasizes "Obedience through Denial," the AI Master will prioritize "Denial" commands in the daily chat.

4. AI "Master" Persona

The AI is no longer a simple keyholder; it is a behavioral architect.

- **Vocal Conditioning:** Utilizing transcripts to mirror the language, tone, and specific trigger words found in the user's training audio.
- **Behavioral Evolution:** The AI tracks long-term compliance trends. If the user resists, the AI shifts to a "High-Intensity Humiliation" mode. If the user submits, it shifts to "Encouraging Reinforcement" to deepen the psychological dependency on the lock.
