Project LockedIn: Product Requirements Document (PRD)

1. User Flow: The "Architect's Order"

1.1 Onboarding & Ingestion

1. **Discipline Assessment:** User defines their "Thresholds for Accountability" and productivity goals.
2. **Asset Ingestion:** User uploads conditioning audio and transcripts.
3. **The "First Lock":** Hardware sync and vision verification to establish the "Base Integrity."

1.2 The Daily Cycle

- **The Mandate:** AI issues a daily set of "Discipline Tasks."
- **Verification:** User must prove compliance via vision or biometric logs.
- **The Journal:** Mandatory evening entry reflecting on the "State of the Lock."

2. Functional Requirements

2.1 RAG-Based Interaction System

- **Context Awareness:** The AI must query the `user_journals` and `training_transcripts` collections before every response.
- **Tone Enforcement:** The AI must maintain a "Dominant/Authoritarian" tone, specifically targeting weaknesses found in the user's journals.

2.2 The "Chronicle" Compiler

- **Compilation Engine:** A service that aggregates `photos`, `journals`, `compliance_logs`, and `session_summaries`.
- **Export Format:** High-end PDF with a "Cyber-Noir" aesthetic, serving as a permanent record of the "Discipline Journey."

2.3 Calendar & History Tracking

- **The Discipline Heatmap:** A visual calendar showing days of 1.0 Integrity (Green/Teal) vs. Failed Integrity (Red/Neon).
- **Session History:** Detailed logs of every hardware-lock session, including start/end times and total time added due to penalties.
